

Problem Solved

EXTEND GEARBOX LIFE

LE's Duolec gear oil is fortified to ensure gearboxes stay lubricated and protected.

Problem: Lubricants that fail to maintain sufficient fluid film strength cannot protect gearboxes from generated metal wear, especially in high-temperature, high-load applications. Ingression of water and other particulates also threatens equipment health.

Solution: LE recommends a complete lubrication reliability program for gearboxes, featuring a high-performance gear oil, desiccant breathers and routine oil analysis.

Duolec Vari-Purpose Gear Lubricant maintains fluid film strength, easily separates from water, and is filterable.

Desiccant breathers prevent ingression of water and other harmful particulates.

LEAP oil analysis monitors oil condition to ensure long-lasting gearbox reliability.

Get started protecting your gearboxes today with a complimentary breather – a must-have item for any gearbox reliability program – by filling out the form at www.LElubricants.com/noria1.html. While you're online, be sure to browse our pages to learn more about LE's high-performance gear oils, breathers and LEAP oil analysis.
