

LE Upgrades Its ATF Formulation for Better Performance

Versatile Fluid Ensures Smooth-Running Automatic Transmissions in Cars and Trucks

WICHITA, Kansas (March 4, 2011) – Lubrication Engineers, Inc. has upgraded its automatic transmission fluid with an uptreated additive package, including its proprietary Monolec® wear-reducing additive. The new Monolec Syn Multi-Vehicle ATF (1150) is a versatile, high-performance product suitable for regular- to severe-duty use in a variety of automatic transmissions in passenger cars and trucks.

Replacing LE's previous ATF, this new fully synthetic formulation is suitable for use in a variety of automatic transmissions, including those used in GM®, Ford®, Chrysler®, Honda®, Toyota® and many other vehicles. Fleet owners will be able to stock and use a single ATF, rather than multiple products.

Monolec Syn Multi-Vehicle ATF ensures smooth shifting, reduced friction and wear on parts, efficient operation in cold temperatures, longer fluid life and a significant decrease in maintenance costs over competitive ATFs. It also prevents thickening and formation of sludge and varnish deposits and resists condensation and acid formation.

“In an anti-shudder durability test, Monolec Syn Multi-Vehicle ATF provided four to five times the protection required by the OEM,” said John Sander, vice president of technology. “These results translate into extended performance and fewer drains in an actual transmission.”

About Lubrication Engineers

A leader in lubricants since 1951, Lubrication Engineers, Inc., manufactures and markets premium lubricants formulated from highly refined base oils. Enhanced with LE's proprietary additives, these oils provide unmatched performance in nearly any application operating in normal to severe conditions. Lubrication Engineers manufactures its lubricants in an ISO 9001 certified quality system at its plant in Wichita, Kan. With its comprehensive offering of versatile lubricants and related reliability products and services – available worldwide – LE provides its customers with increased profitability through longer equipment life, extended service intervals, reduction in energy use, fewer repairs and less need for inventory.
