

## LUBRICATION ENGINEERS<sup>®</sup>, INC LAUNCH OF 1302 DUOLEC<sup>™</sup> INDUSTRIAL LUBRICANT

LE is proud to announce an addition to the industrial lubricants that contain DUOLEC<sup>™</sup>, LE's dual acting Extreme Pressure additive. LE's 1302 DUOLEC<sup>™</sup> Industrial Lubricant has been added to our product line to fill the need for an un-dyed superior performing lubricant that can take the place of 300 MONOLEC<sup>®</sup> Industrial Lubricant.

1302 DUOLEC<sup>™</sup> Industrial Lubricant is an ISO VG 68 high-performance industrial oil. It is designed for use in any industrial gear or bearing application that requires a thermally stable, extreme pressure lubricant. It also meets the requirements for use in many machine tool ways, journal bearings in blower fans and water pumps. In addition, 1302 is fortified with a shear stable tackifier to provide adhesion to the metal during use. This enables the 1302 to stay in place during shutdowns and makes startup easier.

One of the many uses for this amber colored lubricant is as a light to medium duty way oil. Other uses are light colored oil for heavily loaded bearings where condition of the oil is determined by visual evaluation of the color.

Use this lubricant with confidence in any application calling for an ISO 68 amber colored Extreme Pressure gear/way lubricant.

The 1302 DUOLEC<sup>™</sup> Industrial Lubricant will be available in 35 lb pails, 120 lb quarter drums, 420 lb drums and of course in bulk containers as needed.
