

## LE Marks 75 Years of Innovation in Lubrication Reliability

*Powering equipment performance, safety and uptime for customers since 1951*

**WICHITA, Kan. (April 6, 2026)** – [Lubrication Engineers](#) (LE), a leader in high-performance lubricants and reliability solutions, announces its 75th anniversary. Founded in 1951 by three lubricant salesmen in Fort Worth, Texas, the company began with a mission to create higher-performing lubricants that reduce wear and extend equipment life. Over the decades, LE has grown into a global partner for industrial organizations, delivering premium lubricants and reliability solutions that help optimize equipment performance, reduce downtime, and lower total cost of ownership while supporting sustained company growth.

Today, Lubrication Engineers manufactures a full line of enhanced industrial and automotive lubricants in the United States, formulated with highly refined or synthetic base oils and proprietary additives. Operating under an ISO 9001 Certified Quality System, the company also provides reliability services and products such as oil analysis, filtration equipment, breathers, automatic lubrication systems, and other tools designed to extend the life of both lubricants and machinery. Many of these solutions are offered through LE's "X Products" line, allowing customers to implement complete lubrication reliability programs.

In recent years, LE has accelerated its growth strategy through a series of acquisitions, including MicroPoly and Easy Bar in 2021 and Royal Purple Industrial, RSC Bio Solutions, and Swepco in 2025, expanding its product portfolio, technical capabilities, and presence in key industrial and environmentally focused markets. These additions, along with further acquisition activity planned, are helping LE reach more customers around the world, create new jobs, and offer broader career opportunities across its global organization.

Headquartered in Wichita, Kansas, where it operates its manufacturing facility and technology center, LE supports customers through warehouse distribution in Tennessee and California and an international network spanning more than 60 countries. Its customer-focused sales model includes independent consultants across the United States, employee representatives and a dedicated Lubrication Reliability Solutions (LRS) team serving large and strategic accounts in industries such as power generation, food and beverage, mining, paper, transportation and manufacturing.

As Lubrication Engineers marks 75 years in business, the company continues to invest in its people, facilities and technologies to fuel ongoing growth, help customers solve complex lubrication challenges, and achieve long-term operational reliability.

### **About Lubrication Engineers**

Founded in 1951, Lubrication Engineers, Inc. has grown from a visionary lubricant company to a global leader in lubrication reliability solutions. With a commitment to quality and innovation, the company develops proprietary formulas and premium lubricants that enhance machinery performance and reduce equipment wear. Operating a state-of-the-art manufacturing facility in Wichita, Kan., and with a network spanning across the United States and more than 60 countries, Lubrication Engineers provides tailored solutions and exceptional service to businesses worldwide, helping them optimize equipment performance and achieve long-term operational success.
