

## LE Adds Xpert Lubrication Benchmark Audit to Reliability Line *New Service Helps Companies on Path to Lubrication Excellence*

**WICHITA, Kan. (July 2024)** – Demonstrating its ongoing commitment to helping its customers lower their total cost of ownership, Lubrication Engineers has added a new service to its full circle of reliability solution offerings – the [Xpert Lubrication Benchmark Audit](#).

The Xpert Lubrication Benchmark Audit was designed to give companies a 1,000-foot view of their facility, helping them establish where their organization is and what needs to happen next to achieve or maintain Lubrication Excellence. LE's standardized Benchmark Audit is a simple, efficient way to evaluate a facility in these nine key categories:

- Lubrication best practices
- Asset & lubricant identification
- Storage & handling
- Oil analysis & sampling
- Contamination control
- Filtration
- Training, skill development & certifications
- Software, CMMS & EAM
- Safety & accessibility

The audit can be done at anytime – whether a company is just getting started or well on its way with a lubrication reliability program. It can be repeated periodically to allow tracking of progress and focus on next steps. The audit is performed onsite by a local LE representative and provides an accurate benchmark by acknowledging both the good and bad. The customer receives a detailed report with category scores, photos, notes and recommended next steps. After delivering the audit report, the Lubrication Engineers representative can assist as needed with any steps the company chooses to implement.

### **About Lubrication Engineers**

A leader in lubricants since 1951, [Lubrication Engineers](#) is a trusted reliability partner to companies in a variety of industries worldwide. LE creates solutions for tough lubrication challenges, protecting its customers' profits through longer equipment life, extended service intervals, reduced energy use, fewer repairs, and less inventory. It does this with trained consultants, technical expertise, reliability products and services, and a full line of enhanced lubricants manufactured at its plant in Wichita, Kan. LE formulates its industrial and automotive lubricants from high-quality base oils and proprietary additives, ensuring they exceed the performance of ordinary oils and greases. From its warehouses in Wichita, Tennessee and California, the company distributes products around the globe. It has distributors in more than 60 countries and operates under an ISO 9001 Certified Quality System.
