CITY OF FAIRVIEW PARK, OH**

City Vehicles • SIC 9390 Local Government

**“We have not lost a rear-end in the past 15 years using
LE's 607.”**

CUSTOMER TESTIMONIAL

CUSTOMER PROFILE

The City of Fairview Park, Ohio is located in Northern Ohio, near Cleveland. Art Hanrahan is the Service Manager for the City and is in charge of Maintenance on the City's fleet of vehicles. They have been an LE customer since 1981.

APPLICATION

The City of Fairview Park's fleet is varied. They maintain their own Crown Victoria police cars, Ford F-250 and F-350 pickups and dump trucks, F-600 and F-700 dump trucks and L8000 dump trucks and refuse haulers. In the severe winters of Fairview Park, the trucks are also used for snowplowing and for spreading salt.

AREA OF INTEREST

Art Hanrahan was experiencing the loss of the differentials in the heavy-duty vehicles. He had tried numerous brands of gear oils, but they were unable to prevent the loss of the differentials.

LE SOLUTION

In 1982 Art Hanrahan first tried LE's 607 ALMASOL® Vari-Purpose Gear Lubricant. He was so pleased with the success of this lubricant that he has been using it “exclusively” ever since.

CUSTOMER COST SAVINGS

Art Hanrahan says, “We have not lost a rear-end in the past 15 years of using LE's 607.” This has saved the City of Fairview Park thousands of dollars in parts and labor on their City fleet.

OTHER PRODUCTS USED

LE's 3752 ALMAGARD Vari-Purpose Lubricant is used to lubricate all of the city's vehicles. A particular area of concern was the U-joints. Art Hanrahan reports that in the past he had stocked universal joints, just to have enough on hand because their failure was so common. Since changing to LE's 3752 in the early 1980's, U-joint failure has virtually been eliminated.

Art Hanrahan states, *“I can’t remember the last time I had to replace a U-joint or shackle pin for that matter, since I started using your (LE’s) grease. I’ll never switch. I have tried every grease that’s been around and there is nothing that even comes close to yours.”*

In the winter months, LE's 3752 is also used to lubricate the large frames on which the snowplows slide when they are raised and lowered. No other grease was able to withstand the adverse corrosive and washout effects of the salt and slush. LE's 3752 can handle the heavy loading of the plows. It stays in place and does not pound out, even under these severe conditions.

We wish to thank Art Hanrahan, Service Manager and local LE Representative Joseph Kuntz for the information provided to prepare this report.
