

Almagard® Vari-Purpose Lubricant (3752)

Hunter Fan Company – Memphis, Tenn.

Bearings in Various Equipment

- Lasts 8 times longer

Customer Profile

Hunter Fan Company is located in Memphis, Tennessee. They manufacture many well known models of fans.

Application

Various types of equipment are used to manufacture the variety of Hunter fans.

Challenge

The plant manager was concerned with the number of bearing failures occurring in the various pieces of equipment at this facility. Maintenance personnel were replacing bearings monthly because they would seize from carbon deposits. The cost to replace a bearing was \$1,000, with maintenance costs running \$100. It would take three to five hours for two people to replace one bearing.

LE Solution

The local LE lubrication consultant recommended Almagard® Vari-Purpose Lubricant (3752) to solve their

bearing problems. This lubricant is a multi-functional, EP (extreme pressure) lubricant formulated for extended service under severe conditions. It can be used in all types of vehicles, on and off road, as well as in plant applications. Almagard 3752 is very tacky, has excellent water resistance, will not pound out and is rust and corrosion inhibited. It contains Almasol® and Quinplex®, LE's proprietary additives.

Results

Since converting to Almagard 3752, maintenance personnel have commented that it lasts eight times longer than any other grease they have used. This equates to eight times less lubricant used, six times less manpower expended, and a substantial parts savings from longer bearing life. Plant personnel are very pleased with the performance of Almagard 3752.

Thank you to Kris Buchenroth, maintenance manager, and to Bill Gano, LE lubrication consultant (pictured), for providing the information used in this report.
